

Run Radar

Project Statement

Run Radar is a website designed to help runners stay informed about upcoming weather and track their running, providing a convenient platform for runners to plan their runs and monitor their progress. It offers a five-day weather forecast section that displays the temperature and weather conditions, allowing runners to make informed decisions about their running plans and prepare accordingly. Additionally, Run Radar includes a logging feature that allows users to record their runs by easily inputting details such as the date, distance, and time for each run.
